M(M): Mean of the intralaboratory means

s(M): Standard deviation of the intralaboratory means

s(w): Intralaboratory standard deviation

The laboratory mean values have been examined statistically to eliminate outlying values.

Where a "-----" appears in the table it indicates that an outlying value has been omitted by either the Cochran or Grubbs test.

$$C(95\%) = \frac{t \cdot s(M)}{\sqrt{n}}$$

C(95%) is the half-width confidence interval where "t" is the appropriate Student's t value and "n" is the number of acceptable laboratory means. For further information regarding the confidence interval for the certified value see ISO Guide 35:2006 sections 6.1 and 10.5.2.

## Description of the sample

The ECRM 268-1 is available in the form of milling chips in bottles containing 100 g. It is also available as 38 mm diameter discs 25 mm thick. The chips were passed through a 2000 µm aperture sieve and further sieving was carried out to exclude chips passing through a 250 µm aperture sieve.

## Intended use & stability

ECRM 268-1 is intended for the verification of analytical methods, such as those used by the participating laboratories, for the calibration of analytical instruments in cases where the calibration with primary substances (pure stoichiometric metals or compounds) is not possible, and for establishing values for secondary reference materials.

It will remain stable, provided that the bottle remains sealed and is stored in a cool and dry atmosphere. When the bottle has been opened the lid should be secured immediately after use. If the contents should become discoloured (eg. oxidised) due to atmospheric contamination they should be discarded.

## Traceability

The assigned values for each material are achieved by inter-laboratory characterization, each laboratory using the method of their choice, details of which are given below. These methods are either stoichiometric analytical techniques or methods which are calibrated against pure metals or stoichiometric compounds. Most methods used were either international or national standard methods or methods which are technically equivalent.
