Cd	4.1	0.1

^a Unweighted mean value of the means of accepted sets of data, each set being obtained by at least 4 laboratories and/or with different methods of measurement. The values are traceable to the SI (Système International d'Unités) by the use of pure substances of known stoichiometry for calibration.

^b Estimated expanded uncertainty *U* with a coverage factor of *k* = 2, corresponding to a confidence level of about 95 %, as defined in ISO/IEC Guide 98-3:2008 [Uncertainty of measurement - Part 3: Guide to the expression of uncertainty of measurement (GUM:1995)].

End of Validity

The validity of this certificate ends 5 years after delivery

Date of dispatch:

Material Description

The homogenized sewage sludge ash BAM-U201 is in powder form. Approx. 30 g of the sewage sludge ash BAM-U201 was filled into a brown 50 mL wide-neck bottle.

Recommended Use

The purpose of CRM BAM-U201 is to verify analytical results for total mass fractions and aqua regia extractable mass fractions of listed elements in sewage sludge ash. Approximately 0.2 g of material should be used for a wet chemical analysis.

Handling

When handling the sample, the bottle should be left open for as short a time as possible. Care should be taken not to absorb moisture after opening the bottle. The material should be used as it comes out of the bottle. However, it is recommended to re-homogenize by manually shaking the closed bottle before taking a partial sample.

Transport and Storage

After receipt, the material should be stored at a temperature below 25 °C in the tightly closed original bottle. BAM cannot be held responsible for changes that occur during storage of the material at the customer's site, especially with opened samples.

Participating Laboratories

Certification took place at various laboratories within BAM.

Metrological Traceability

The total contents of the specified elements in BAM-U201 are metrologically traceable to the kilogram. The method for determining the aqua regia extractable contents for the specified elements in BAM-U201 are operationally defined referring to the analytical protocols prescribed in DIN EN 16174:2012-11.

Literature

A detailed report describing the certification of the reference material BAM-U201 is available on request or can be downloaded from the BAM website (<https://rrr.bam.de>).

DIN EN 16174:2012-11: Sludge, treated biowaste and soil - Digestion of aqua regia soluble fractions of elements; German version EN 16174:2012.
